The evaporator coil. This HVAC part is also in the furnace, but handles a different job. Refrigerant (a fluid that causes cooling) runs through the evaporator coil. The coil absorbs heat from air passing over it. The now-cold air blows through the air ducts throughout your home.

HVAC System Basics For Beginners

Many HVAC systems employ chilled water or a refrigerant as the fluid in the cooling coils. For refrigerant liquid HVAC systems, cold air is produced through a process of vapor-compression. When a refrigerant boils or evaporates, it rapidly draws in the surrounding heat energy. Refrigerants have a much lower boiling point than water.
